

CAMERA KITS FOR EXCAVATORS

REVERSING-E

Reversing camera system for an excavator

- Digital HD Camera Systems
- Analog PAL/NTSC Camera Systems
- Reversing, tool view, side view systems
- Surround 270° and 180° camera systems

Product description

The working position of an excavator arm often causes significant limitation of the field of vision to the right and rear of the machine. Using orlaco camera kits can enhance the field of vision from reversing cameras to reversing-side-tool-view or surround 270° view. Available as analog and digital systems.
