

CAMERA KITS FOR TELEHANDLERS

REVERSING-T

Reversing camera system for telehandler

- Analog PAL/NTSC
- Digital HD
- Reversing, reversing-side and tool view systems
- Active reversing and active reversing-side view

Product description

The working position of the mast on telehandlers cause significant limitation of the field of vision, to the right and rear of the machine. Gaining a satisfactory view of the attachment during maneuvering of forks is, after all, not optional. Orlaco supply a range of camera kits to compensate these vision losses and enable viewing in these area.

Specifications
