16550.2
DOULINK IO GSM MODULE

- Universal Inputs
- Global Modem
- Screw or Push In Terminal Options
- USB-C Programming port & Free Software
- Expandable IO & Wifi option

PRODUCT DESCRIPTION

CONTA-CLIP's DuoLink module is an easy-to-use SMS reporting for remote monitoring of equipment that can signal changes of inputs and outputs through text messaging and email.
Wide band LTE 4G modem as standard to give full global coverage. To add to the range, there are GPS and Ethernet versions that automatically drop back to the GSM network if failed.

The DuoLink module informs you when your process has achieved a user-defined status or limit value. Digital and analogue inputs values can also be sent via e-mail or SMS (text message). The digital relay outputs can be switched using an SMS sent from selected users allowing the system to be monitored and controlled remotely.
To further add to the flexibility, a Web Portal CONTA-SUPERVISION is available to make the monitoring and control functions of the DuoLink & GSM-PRO2 modules even easier to operate and can work across all platforms.
