

WIKA SHEAR BEAM FORCE SENSOR F3201

F3201-79102840
Bending force sensor 2000 kg

- 0..500 - 0..2000 kg
- Stainless steel
- OIML approved
- 2 mV/V output

Product description

Shear force sensors are designed for static and dynamic measurements, both compression and tension.

These sensors are used in industrial weighing and measuring, in the laboratory and in the process industry. In this way, containers and containers can be weighed very accurately.

The cutting force sensor F3201 is made of steel or stainless steel, which are particularly suitable for a wide range of applications.
