#### Product description

Opening the clamp to release the wire is done using the integrated insulated plunger that insures that actuating the clamping spring is completely safe. This gives you a noticeable time advantage during the wiring process. The extremely compact terminals ensure a high current carrying capacity, a secure fit and the highest level of stability on the rail. The new feed-through and protective earth terminals will be available in six cross-section ranges from 1.5 mm<sup>2</sup> to 16 mm<sup>2</sup> in 2, 3 and 4-wire connection variants for wire cross-sections of 0.34 mm<sup>2</sup> to 25 mm<sup>2</sup>. The addition of double and triple deck terminals is also available in this growing range.
