

PHOTONEO MOTIONCAM-3D

3S-MBMP-3AF0F
MotionCam-3D M+

- Robust Against Vibrations and Ambient Light
- Highest Resolution and Accuracy in 3D Scanning of Dynamic Scenes
- Scanning Range From 36cm to 3 Meters
- Works For Objects Moving Up to 40 m/s
- Point cloud with a resolution of 0.9 Megapixel and 15 million 3D points per second

Product description

Photoneo MotionCam-3D is the highest resolution and highest accuracy 3D camera for dynamic scenes in the world. The scanner gives you accurate point clouds in a high level of detail without compromising quality or being disturbed by vibrations, ambient light or motion blur. This makes MotionCam-3D the perfect 3D scanner for handling objects in motion.

The power of parallel structured light

MotionCam-3D uses parallel structured light , which provides the same quality and resolution as regular structured light - but in dynamic scenes. This new patented technology uses a smart sensor design that scans the object in a snapshot as opposed to a standard image sensor that scans sequentially. This means that the method practically freezes the 3D scene in time.

Specifications

| | |
|------------------------------------|---|
| Calibration accuracy (1 σ) | 0.6 |
| DC input | PoE & 24V |
| Depth | 80 |
| GPU | NVIDIA Pascal Architecture med 256 CUDA cores |
| Height | 68 |
| IP Class | IP65 |
| Point to point distance | 0,52 mm |
| Scanning area at maximum spot | 1317 x 951 mm |
| Scanning range max | 1574 |
| Scanning range min | 630 |
| Scanning time | 10 ms |
| Temporal noise (1 σ) | 0.1 |
| Weight | 1400 |
| Width | 427 |

630
