

DATALOGIC - VISION SENSOR DATAVS2 AOR

DATAVS2-06DEAOR

Vision Sensor, 6mm lens, ADV Object recognition, Red LED

- 360° pattern recognition
- 8 different controls
- Memory for up to 20 different inspections
- 4 outputs

Product description

DataVS2 is a series of Vision sensors for flexible solutions for machine applications.

The sensor is complete with optics, red LED lighting and electronics in a compact housing. The parameters in the sensor are set via PC through Ethernet communication. The software comes with the sensor and is developed to lead the user step by step through parameter setting. DataVS2 is available in three different versions with different control instruments.

Advanced Object recognition AOR - Has a control instrument for 360° pattern recognition.

.Logic functions for that are connected between different control instruments and outputs such as: AND, OR, NOT, NAND, NOR etc.

Technical data

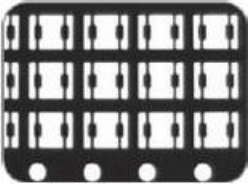

Supply voltage	24 V DC $\pm 10\%$
Ripple	1Vpp max. with lighting 2Vpp without lighting
Current consumption	100 mA at 24 VDC (without lighting)
Output type	4 PNP
Output current	100 mA max.
Resolution	640x480 (VGA)
Network interface	M12 4-pole Ethernet 10/100 Mbps
Interface external lighting	Strobe signal (24 V PNP N.O)
Frame rate	60 fps

optics	integrated (6 mm/8 mm/12 mm/16 mm)
Indication	4 LED
Connection	M12 8-pole A-coded M12 4-pole D-coded
IP-class	IP50
Encapsulation material	Aluminium alloy/ABS
Weight	125 g
Working temperature	-10 to +50 °C
Storage temperature	-25 to +70 °C

Control instruments

Control	Function	Applications	Image
Pattern Match	Search for a sample within a specified range	<ul style="list-style-type: none"> • Packaging: check of logo • Installation: product-orientation • Automation of post: stamp control 	
Contour Match	Control of form	<ul style="list-style-type: none"> • Metal working: integrity check • Foodstuffs: control of form 	
Position	Control of limit position of the object	<ul style="list-style-type: none"> • Bottling: level control • Foodstuffs: control of label position 	
Width	Measures the object's width	<ul style="list-style-type: none"> • Installation: control of plastic parts • Woodworking industry: measurement of branch thickness 	

Counting	Counts number of objects along a line	<ul style="list-style-type: none"> Electronics: counting components Pharmaceutical industry: Counting units 	
Contrast	Calculation of contrast	<ul style="list-style-type: none"> Foodstuffs: checking presence of date and consignment label Metal working: Check of laser marking 	
Brightness	Calculation of luminance	<ul style="list-style-type: none"> Bottling: checking presence of cap Packaging: counting objects

Specifications

Frame Rate	60
Interface	Ethernet 10/100 Mbps (4-pole M12 -connector)
IP Class	IP50
Optics	6mm integrated lens
Output current max	0.1
Power consumption max	0.1
Resolution	640x480 (VGA)
Temperature range from	-10
Temperature range to	50
Voltage DC max	24

The Advanced Object Recognition (AOR) models integrate new important functionalities, including:

360° Pattern Match Locator
Object detection independent from rotations.

Logical tools
Possibility to combine the results of the single tools through boolean operator (AND, OR, NOT, etc.).

Advanced Ethernet
Current inspection results available also on Ethernet communication.

Speed-up
High execution speed thanks to the management of reduced resolution and TURBO mode.

360° Pattern match

Step 1: Image Setup

The first step consists in connecting the sensor and configuring the image quality parameters. When the desired results are obtained, the user can memorise the image that will be used as a template during sensor functioning.

Step 2: Teach

The second step establishes the acceptance criteria to distinguish objects from wastes. One or more controls can be selected according to the task to carry-out.

Step 3: Run

The third step configures the sensor digital outputs, simulates sensor functioning on the PC to verify the controls chosen and activates the operating phase on the sensor using the PC only to control the diagnostics.

M12 4-pole Ethernet

PIN 1 = white/orange = RX+
PIN 2 = white/green = TX+
PIN 3 = orange = RX-
PIN 4 = green = TX-

M12 8-pole (power supply and I/O)

PIN 1 = white = digital input 1
PIN 2 = brown = 24 Vdc
PIN 3 = green = STROBE for external illuminator
PIN 4 = yellow = output 1
PIN 5 = grey = output 2
PIN 6 = pink = output 3
PIN 7 = blue = GND
PIN 8 = red = external trigger
