

MIDWEST OPTICAL - BN470

F/BN470-C

Bandpassfilter - narrow, 470nm, for C-Mount

- Blue bandpass filter that blocks UV
- Work area 460-490 nm
- For blue LED

Product description

Midwest Optical Systems bandpass filters are ideal for use in combination with LED or laser diode lighting. These filters consist of a precision polished glass filter with an anti-reflex coated surface. They are more rough, thinner, less angular and have a much higher transmission than conventional filters. Use of bandpass filters improves the contrast and often eliminates unwanted effects of disturbing ambient lighting.

Specifications

Filter thread (thread diameter x pitch)

C-Mount
