### Product description

The 2551 Magmeter measures the flow rate in a full pipe by monitoring the voltage produced when the (conductive) fluid moves through a magnetic field. Output options include a traditional frequency signal, a serial data (Digital (S<sup>3</sup>L)) output, and a 4 to 20 mA output. The 2551 Magmeter is available in three sizes that will accommodate pipes from ½ inch through 36 inch diameters. Select from three different material combinations to match the Magmeter to the application requirements.
