

ENERGY METERS - DIN MOUNTED

AP151DO

Multi Function Meter 1 Phase Direct Conn

- Single and three-phase options — covers most common metering applications from one range
- Direct and CT connect variants — flexible for low and high current installations
- Dual, tri, and quad load models — multiple circuits monitored from a single DIN rail device
- Easywire RJ12 connectivity — plug-and-play wiring reduces installation time and errors
- DIN rail format — compact and easy to integrate into distribution boards and panels

PRODUCT DESCRIPTION

Sifam Tinsley DIN rail mounted energy meters provide flexible and accurate single and three-phase energy measurement for a wide range of panel building and sub-metering applications. The range includes direct connect and CT connect variants for both single and three-phase circuits, alongside multifunction models supporting dual, tri, and quad load monitoring — ideal for tenant sub-metering, distribution boards, and multi-circuit energy management. Easywire RJ12 connectivity on multifunction models significantly reduces installation time and wiring errors, making them a practical choice for high-density metering installations.
