

STEEL EXTENSION SPACERS

DZM1020

Steel Exten Spacer 30mm x M4 x 7mm DZM30M4

- Multiple lengths: 15mm to 70mm
- Thread sizes: M4, M5, M6
- Corrosion-resistant finish
- 500 N/mm² tensile strength
- Easy hexagonal tightening

PRODUCT DESCRIPTION

Teknomega's **steel spacers** are precision-engineered components designed to ensure optimal spacing and mechanical support in electrical panels and assemblies. Made from high-tensile galvanized steel (500 N/mm²), these spacers come in various lengths and thread sizes (M4, M5, M6) to suit a wide range of applications—from compact to extended spacing needs.

Whether you're working with tight installations or requiring greater separation between components, Teknomega spacers deliver consistent durability, corrosion resistance, and mechanical reliability. Their hexagonal design allows for easy tightening and secure fitment, making them ideal for both panel builders and OEMs
