

CYLINDRICAL FUSE WOHNER

31110(FUSECARRIER)

Fuse Carrier 1 pole 32A 10*38

- Trusted Wöhner quality Precision-engineered fuses from a leading German manufacturer.
- Reliable overload and short-circuit protection Fast, predictable disconnection to protect equipment and wiring.
- Designed for industrial environments Suitable for control panels, switchgear and power distribution systems.

PRODUCT DESCRIPTION

Wöhner cylindrical fuses are designed to protect electrical systems against overloads and short circuits in demanding industrial environments. Known for precision engineering and consistent performance, these fuses are widely used in control panels, switchgear, distribution boards and machinery installations. Here's the thing — when protection fails, everything stops. Wöhner cylindrical fuses are built to interrupt fault currents quickly and safely, limiting damage to cables, components and equipment. They're ideal for applications where reliability, selectivity and compliance with international standards are critical.

Used alongside Wöhner fuse holders and busbar systems, these cylindrical fuses integrate cleanly into modern panel designs. Irish panel builders, OEMs and industrial electricians rely on Wöhner for dependable protection in automation, manufacturing and energy systems. Demesne Electrical supplies a full range of Wöhner cylindrical fuses in Ireland.
