

TAPERED ROLLER BEARINGS METRIC

234234

Switch Fuse 1 pole 63A Neozed

- For combined loads
- Axial load in one direction

Product description

We only show single row tapered roller bearings in this catalogue, contact Internordic for more information on two and four row tapered roller bearings. Things to consider WHY A BEARING SHOULD BE LUBRICATED Avoid metallic contact between the roller bodies and bearing rings - eliminate wear and tear Reduce friction in the bearing Protect against corrosion If lubrication is done with grease, the purpose of lubrication is usually to keep contaminants out as well. WHEN SELECTING BALL AND ROLLER BEARINGS Load - radial/axial Tipping moment Breaking stresses Environment/type of contamination/temperature Rotational speed Space
