ZEBRA AURORA VISION DEEP LEARNING

Formerly Adaptive Vision Deep learning add-on

DL-02350-01C8
Zebra Aurora Deep Learning Runtime OCR, CoreLimit 8

- Artificial intelligence for machine vision
- Easy to use and set-up
- Great for defect detection
- Small training set requirement

Product description

Deep Learning Add-on is a new breakthrough in machine vision applications. It is a set of ready-made tools which are trained with Good and Bad samples, and which then detect defects or features automatically. Internally it uses large neural network structures, designed and optimized by our research team for use in industrial inspection systems. For the user, however, they are provided as simple filters with very few parameters, and with easy-to-use graphical tools for convenient execution of the training process.

Contact OEM for an online demonstration and see just how easy artificial intelligence (AI) can be.
