

LEVEL MONITORING RELAYS

E3LM10

Monitoring Relay Level Control 230v AC

- Conductive liquid detection — suitable for water, wastewater, and process fluids
- Pump protection — prevents dry-run and overflow damage
- 230V AC supply — standard panel voltage, no additional power supply needed
- Single changeover output — clean, simple integration into control circuits

PRODUCT DESCRIPTION

The Telehase E3LM10 level monitoring relay provides reliable liquid level detection and control for single-phase 230V AC applications. Designed for use with conductive liquids, it offers a simple and cost-effective solution for pump control, overflow protection, and dry-run prevention in tanks and reservoirs. With a single changeover output and DIN rail mounting, it integrates easily into standard control panels across water treatment, HVAC, and industrial process applications.
