

## GRID MONITORING RELAY

NA003-M64

NA003 Grid controller protection relay

- Multi-function grid protection — voltage, frequency, and ROCOF in a single unit
- Renewable energy ready — suitable for solar PV, CHP, and backup generation
- Grid compliance support — aids G99/G100 disconnection requirements
- Advanced protection functions — reduces risk of islanding in distributed generation

### PRODUCT DESCRIPTION

The Telehase NA003-M64 is an advanced grid and system protection relay designed for monitoring mains supply integrity in renewable energy, distributed generation, and critical power applications. It provides comprehensive protection functions including over/undervoltage, over/underfrequency, and rate of change of frequency (ROCOF) — ensuring safe disconnection from the grid in the event of a supply fault. Suitable for use in solar PV, CHP, and backup generation installations where grid compliance is required.
